

LA PLAGNE ALTITUDE

This is where it all started, the part known locally as the 'altitude' area which was the birthplace of the winter sports resort. Plagne Centre, built in 1961, was the starting point for the construction of 7 villages, all situated above 1800m. At the end of 21 (numbered) hairpin bends, you come to: Plagne 1800, Plagne Centre, Plagne Soleil, Plagne Villages, Plagne Aime 2000, Plagne Bellecôte and, finally, Belle Plagne. Architectural styles and atmospheres differ so that everyone can find their personal favourite.

WE LOVE

- / **The direct access to the mountain peaks**, thanks to the high altitude and the lift system that makes it so easy for skiers. The geographical position of the 7 altitude villages leads to optimum snow conditions throughout the winter season.
- / **The activities for non-skiers:** zip wires, dog sledding, snow shoeing, cinema, bowling, skating rink, Nordic walking... Non-skiers have plenty to do too!
- / **Facilities for those with reduced mobility** in Plagne Aime 2000 and Plagne Centre, where it is easy to get around the galleries and out to the slopes. The Téléméto, a gondola that links the two sites without having to go outside, is ideal for wheelchairs.

TO DO AND SEE

- / **The bobsleigh track**, unique in France and open to the public. Different machines have been developed to let everyone have a go for a real thrill on the snaking icy run that dates back to the 1992 Olympics. Speeds reach between 80 and 120 km/hr!
- / **The 1.5 km long toboggan run** that follows a former red run. Minimum height for the 'Colorado Park' is 1.40m, wearing a helmet and skiwear. A fun, adrenalin-filled moment to enjoy with family or friends.
- / **The Jaguar Land Rover experience** with the resort's partner. Driving tests, driving on snow, children aged 11-17 can even take the wheel to have fun on a course adapted for them.

IN FIGURES

- / 1800 to 2050m altitude
- / Built between 1961 - 1990
